

- 1 Methods used in the study of diversity and taxon richness
- 2 Lecture layout
- 3 The term biodiversity
- 4 The need for diversity measures
- 5 Classifying diversity
- 6 For example: α -diversity
- 7 For example: β -diversity
- 8 For example: γ -diversity
- 9 The two key attributes
- 10 The relative abundance of species
- 11 The logarithm of rank-abundance
- 12 Models of relative abundance
- 13 The log abundance - rank plot
- 14 The species accumulation curve
- 15 Smoothing the species accumulation curve
- 16 Have sufficient samples been collected?
- 17 An example with extensive sampling
- 18 Alpha diversity indices
- 19 Fisher's Alpha
- 20 An application of Fisher's Alpha
- 21 Berger-Parker dominance index
- 22 Shannon-Wiener diversity index
- 23 Simpson's diversity index
- 24 Families of indices
- 25 Contradictory conclusions
- 26 Checking for contradictions – Diversity Ordering
- 27 Comparing the indices of two samples
- 28 The butterfly data
- 29 Solow's randomisation test
- 30 Results of Solow's randomisation test
- 31 Giving a diversity index a standard error
- 32 An example jackknife – chalk stream ecology
- 33 A guide to the analysis of diversity
- 34 Evenness indices
- 35 Smith and Wilson's view
- 36 A comparison of evenness performance
- 37 Diversity indices will remain widely used but..
